**ABSTRAK**

Graf helm  $H_n$  merupakan graf yang didapatkan dari sebuah graf roda  $W_n$  dengan menambahkan sisi anting-ting pada setiap titik di sikel luar. Sedangkan graf helm tertutup  $cH_n$  merupakan graf yang diperoleh dari sebuah graf helm  $H_n$  dengan menghubungkan tiap titik anting-ting untuk membentuk sikel. Pada penelitian ini, diperoleh bahwa matriks ketetanggaan dari graf helm  $H_n$  memiliki nilai determinan 0. Selain itu, diperoleh pula hasil mengenai determinan matriks ketetanggaan dari graf helm tertutup  $cH_n$ .

Kata kunci : graf helm, graf helm tertutup, matriks ketetanggaan, determinan

**Determinant of Adjacency Matrix of Helmet Graph  $H_n$  and Closed Helmet  
Graph  $cH_n$**

**ABSTRACT**

The helmet graph  $H_n$  is a graph obtained from a wheel graph  $W_n$  by adding an earring edge at each point in the outer cycle. Meanwhile, closed helmet graph  $cH_n$  is a graph obtained from a helmet graph  $H_n$  by connecting each earring point to form a cycle. In this study, it was found that the determinant of adjacency matrix of the helmet graph  $H_n$  is zero. In addition, it is also obtained the determinant of the adjacency matrix of the closed helmet graph  $cH_n$ .

Keywords : helmet graph, closed helmet graph, adjacency matrix, determinant
